

Company Overview:

Hobbs Architectural Fountains was established in 1966 by William Hobbs, and is the superior brand behind thousands of dazzling water fountains, water features, and aquatic special effects seen around the world. The design and manufacturing facility is located in Atlanta, Georgia, and holds the resources needed to ensure successful fountain development from design to construction. Hobbs is able to provide “turn key” or “design build” water feature solutions in no small part because of the multidisciplinary team of professionals including designers, engineers, manufacturers, fabricators, and builders.

Hobbs Architectural Fountains is internationally recognized for the ability to produce brilliant and entertaining water displays as well as quiet contemplative features. The national headquarters beholds the knowledge base and materials needed to guarantee an efficient transition from the design, engineering, and construction phases to start-up and maintenance training. An outdoor test tank is utilized to test the custom Pumping Stations® and equipment Pads® before they are shipped to the job-site. A 600 sq. ft. indoor test tank allows Research & Development to enhance design concepts, test new products including pumping & filtration systems, develop & demonstrate spray effects, and to create vast scales of water feature prototypes. Prototyping fountain aesthetics and construction allow the Research & Development to determine exact flow requirements and select materials to develop every imaginable water display.

Environmental effects like wind currents, regional climate, & noise levels are analyzed to determine resulting splash, and to fine-tune the overall design prior to equipment production and fountain installation. It is the combination of these resources that protect our clients from unforeseen construction difficulties, delays, and added expenses. The end results are water feature aesthetics as visualized in the initial design process.

Wm. Hobbs Ltd. Services and Expertise

- **Hobbs Architectural Fountains**

The Hobbs Architectural Fountains division specializes in conceptualization and design development both domestically and internationally. Our design engineers and consultants are experts in aligning water features with the architectural plan. The consultants and engineers will work with our clients on the aesthetic affects of various scenarios and create new and innovative ideas that inspire thought. After a vision is decided upon it is up to our project designers to manage the engineering and material supply for fountains and interactive water features. Hobbs has a state of the art product line that contains signature products manufactured in our OEM facility in Atlanta. Hobbs offers an array of cost saving standard pumping assemblies to fit most applications. Specializing in custom fabrication enables Hobbs to produce unique displays that are true pieces of art.

- **H₂O Fun**

The H₂O Fun division specializes in aquatic play water features and aquatic recreational facilities. With a new rebirth in product innovation and broader sales, H₂O Fun strives for the finest water play equipment in the industry. H₂O Fun offers an array of cost saving standard pumping assemblies to fit most applications.

- **Hobbs Parts & Service**

The Parts & Services division maintains the relationship with clients by extending a one year warranty on all replacement parts & services; the department is also obliged to initiate maintenance schedules for fountains that Hobbs did not have the opportunity to design and build. Hobbs extends service packages for Fountain Management Training, Winterization, Spring Start-Up, Upgrades, and Preventative Maintenance. This ensures that the client's water feature will achieve optimal health for the entirety of its life cycle. The Hobbs Product Catalog contains a complete line of industry standard and signature water feature components which has extended into new markets.

- **Floating Fountains**

Floating Fountains are monumental water feature that reach heights of eighty feet high while naturally aerating the body of water in which it is installed. These fabulous features are custom built for each project due to the personality and customization each spray effect may possess.

- **One Source Aquatics**

One Source Aquatics manages the construction all types of water features. One Source Aquatics has a team of experienced and factory-trained technicians who specialize in aquatic installations; these team members provide onsite consulting and project management due to the highly sophisticated mechanical and electrical nature of the advanced equipment in such a specialized field. One Source Aquatics allows for a seamless transition of scopes during the construction of the water feature for the client.

Wm. Hobbs Ltd. Key Personnel

- **William Hobbs** CEO & Founder
 - Georgia Institute of Technology, BS of Industrial Design
 - Harvard University, School of Design
 - 43 years of water feature design experience, architectural detailing, engineering design, industrial design and custom fabrication, construction and installation experience
 - Project engineered and project managed over 1000 projects
 - Developed full line of signature spray features and components that yield the industry standard.

- **Colin Goodrich** Chief Operations Officer
 - University of Rochester, BS of Mechanical Engineering
 - University of Georgia, MBA
 - 8 years of water feature design & consulting, irrigation, mechanical, electrical, structural, installation, and construction experience
 - Project engineered and project managed over 50 projects
 - Controls operations of all divisions/companies to meet all project timelines

- **Lee Fain** Vice President of Hobbs Architectural Fountains
 - Georgia State University, BBA of Business Administration
 - 10 years of water feature design & consulting, mechanical, electrical, installation, and construction experience
 - Project engineered and project managed over 120 projects

- **Shelly Hobbs** Vice President of H₂O Fun
 - Georgia State University, BBA of Marketing
 - 6 years of water feature design & consulting, mechanical, and installation experience
 - Project engineered and project managed over 30 projects

Wm. Hobbs Ltd. Key Personnel

- **Lynette Mathews** Director of Engineering and Operations
 - Georgia Institute of Technology, BS of Mechanical Engineering
 - Georgia Institute of Technology, MS of Mechanical Engineering
 - 16 years in machining and custom metal fabrication, production, mechanical, and electrical experience
 - 7 years project engineering
 - Manages project workflow through production

- **Wayne Pierce** Production Manager
 - 14 years of water feature design & consulting, mechanical, electrical, installation, and construction experience
 - Project managed over 80 projects
 - Oversees production and custom fabrication of pumping systems and parts

- **Lamar Ledford** Services & Technical Support Division Manager
 - Foley Belsaw Institute, Electrical Certification
 - OSHA 10 & 30 Certification
 - 11 years of water, waste water, mechanical & electrical construction
 - Management role in over 30 projects
 - Largest project size \$125 million

- **Lamont Mealer** One Source Aquatics Superintendent
 - 30 years of water features, waste water, mechanical, electrical, installation, and construction experience
 - Project managed or superintendent on over 40 projects
 - Largest project size \$300 million

National Portfolio

• Traditional Fountains

- World War II Memorial, Washington DC
- Korean War Memorial, Washington DC
- Tyler Davidson Fountain, Cincinnati, OH
