

## 236 Series

### Sump

#### Function:

The **236 Series Sump** is our largest sump and is installed flush in the pool floor. The sump can serve a number of functions, but is typically used in one of the following ways:

- 1. Suction Sump** - When used as a suction sump, the fitting prevents vortexing by forcing water to circulate across the pool floor. Vortexing allows air to enter the suction line, eventually shortening the pump life. Also, the improved water circulation caused by the sump helps keep the pool floor clean.
- 2. Ballast Fitting** - The sump may be used as a ballast fitting for waterfalls, or as a dump line in fountains with our 492-Series Wind Compensation System.
- 3. Equalizer Fitting** - The sump may be used as an equalizer between pools with equal water levels.

#### Key Features:

- Body is roto-molded black polyethylene and includes integral waterstop flange.
- Body includes two formed-in 1/4"-20 female thread brass inserts on top surface for attachment of anti-vortex/diverter plate.
- Diverter plate is cast bronze with lip allowing installation of thin-set tile.
