

Function:

The 195 Series Pool Deck Jets are specially designed for flush mount installation around a pool's edge. The interchangeable inserts allow you to update the spray effect as desired. Available in a single jet, or double jet spray pattern these are sure to add a little something extra to your back yard.

When multiple jets are used, we can provide a manifold type set up which allows for an easier installation and a single connection point to incoming water.

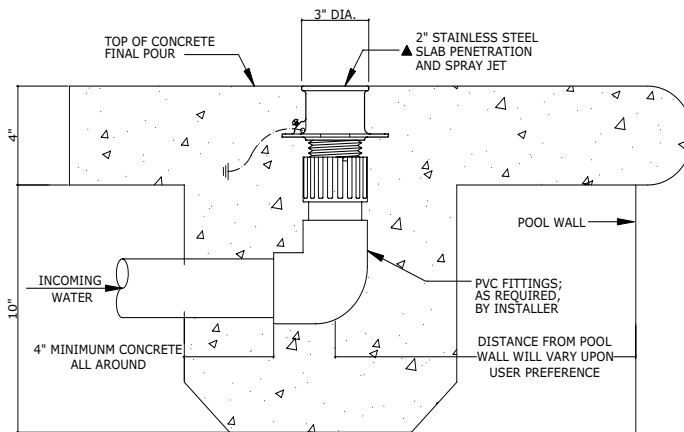

195 Series
